

Nutri-Mix

Multi-Grain Flour

Ragi + Bajra + Maize

A nutrient-dense, economical flour
for health & livelihood.

*Project by
Abdul Razak (B. Tech)
E tejaswini (PhD Scholar-Foods & Nutrition)
Dr. Ramagiri Praveen Kumar (Associate professor)*

Why a Multi-Grain Flour?

- Lifestyle diseases are rising — diabetes, anaemia, weak bones.
- Single grains lack complete nutrition.
- Solution → blend **Ragi (Calcium) + Bajra (Protein & Iron) + Maize (Energy & Fibre)**

Key benefits of the 50 : 30 : 20 blend (per 100 g)

Bone strength

186 mg

Calcium

Muscle growth

9.4 g

Protein

Digestive health

2.7 g

Fibre

Anaemia care

4.8 mg

Iron

one flour → many meals

50 : 30 : 20

Team Details (Manpower)

Role	No.	Key Responsibility
Technical Person	1	Grain selection, grinding process, quality check
Non-technical (Labour)	1	Cleaning, drying, packaging, labeling

**Total team size:
2 people per SHG unit**

**Training required:
2 days (mill + hygiene)**

one feeds, one collects 📌

The Innovation — Nutritional Synergy

Three scientific principles we used:

1. Complete Protein

Ragi → rich in Lysine (low Methionine)

Bajra & Maize → rich in Methionine

Together → complete protein (like animal sources)

2. Calcium + Phosphorus

Ragi → 344 mg Calcium

Bajra → 296 mg Phosphorus

Both needed for strong bones

3. Fibre Synergy

Soluble fibre (Ragi)

+ Insoluble fibre (Maize, Bajra)

Prevents constipation without bloating

R → B → M = Complete Nutrition

Proposed Budget — 1 SHG Unit

Item	Cost (₹)	Type
Stone grinding mill (Chakki)	25,000	One-time
Weighing machine (×2)	10,000	One-time
Refrigerator	30,000	One-time
Airtight containers (×12)	5,000	One-time
Mixing bowls & sieves	5,000	One-time
Raw material (per kg flour)*	65 – 85	Monthly
Grinding charges (per kg)	20 – 30	Monthly

* Ragi 500 g • Bajra 300 g • Maize 200 g

Yellow = one-time • Green = monthly

Total initial setup

≈ ₹ 75,000

one-time investment

Monthly operational

≈ ₹ 3,000

recurring cost

Business Strategy

Target Customers

- Households with kids & elderly
- New mothers (bone health)
- Fitness conscious
- Local kirana stores

Pricing Strategy

- Cost to make 1 kg flour: ₹ 135 – 195
- Retail price: ₹ 220 – 250 / kg
- Bulk to SHG federations: ₹ 180 – 200 / kg

Distribution Channels

- Local weekly markets (haats)
- Anganwadi centres (take-home ration)
- School mid-day meal suppliers
- WhatsApp / local Facebook groups

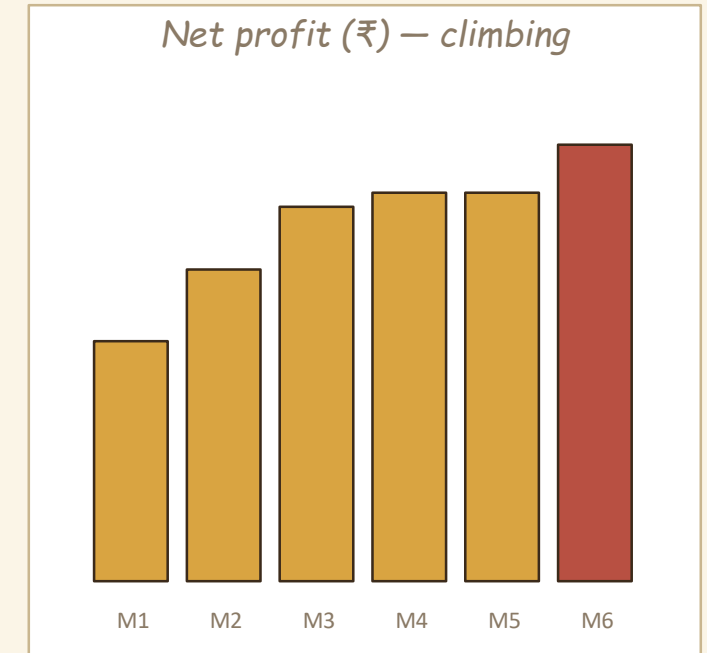

Zero-Cost Marketing

- Demo cooking at SHG meetings
- Free 50 g sample with grocery
- “1 roti = 1 day’s calcium” sticker on pack

Revenue Projections — First 6 Months

Assumptions: 30 kg / week • 120 kg / month • 50% retail @ ₹220 + 50% bulk @ ₹190

Month	Production (kg)	Avg Price (₹/kg)	Revenue (₹)	Op. Cost (₹)	Net Profit (₹)
1	80	200	16,000	6,000	10,000
2	100	205	20,500	7,500	13,000
3	120	205	24,600	9,000	15,600
4	120	210	25,200	9,000	16,200
5	120	210	25,200	9,000	16,200
6	130	215	27,950	9,750	18,200

Break-even within $\approx$ 5 months

Product Applications — Six Ways

Multigrain Roti

Mix with warm water, knead, roll, cook on tawa.

Health Porridge

Cook 2 tbsp flour in water/milk + jaggery or salt.

Infant Food (8m+)

Light roast + cook into smooth paste.

Kanji Drink

Mix with buttermilk + salt + cumin, ferment overnight.

Fitness Dosa

Batter with curd, ferment 4 hours.

Ladoo

Dry roast in ghee + jaggery + nuts.

roti • porridge • ladoo

Social Impact & Awareness

Direct benefits to community

- Creates local employment (2 persons / unit)
- Reduces anaemia & malnutrition in women & children
- Uses locally grown millets → supports farmers
- Low-cost alternative to packaged “health flours”

Awareness plan

- 1 workshop per month in 5 villages
- Demonstrate “₹5 roti = complete protein”
- Partner with ASHA workers for pregnant women

“Healthy family + steady income = real empowerment.”

Conclusion & Next Steps

Summary

- 50:30:20 Ragi-Bajra-Maize → nutritionally superior & low cost
- Stone milling preserves nutrients & natural oils
- Start with ₹ 75 k → break even in 5 months
- Daily nutrition + monthly income for rural women

Next Steps

1. Register as SHG micro-enterprise
2. Apply for NABARD / KVIC millet subsidy (up to 40%)
3. Conduct first 10 kg trial batch
4. Get FSSAI basic licence (₹ 2,000 – 3,000)
5. Supply to local ICDS centres

“ Small mill, big impact — from grain to gain. ”
