

Photographs related to the proposed multi-grain flour innovation are attached below.

These images represent the raw materials (Ragi, Bajra, and Maize), the preparation process including cleaning, mixing, and grinding, and the final product concept.

Figure 1: Raw materials – Ragi, Bajra, and Maize

Figure 2: Cleaning and sorting of grains

Figure 3: Sun drying process

Figure 4: Grinding using stone mill

Figure 5: Final multi-grain flour product

The photos demonstrate the practical feasibility of the idea and the step-by-step process involved in developing the nutrient-dense multi-grain flour.

This documentation supports the proposed innovation under the Nutrihub NSTEP program.
